Important notes

Usage for the intended purpose

The conductivity electrode LRG 16-9 together with the conductivity switch LRS 1-.. or conductivity controller LRR 1-.. is designed for measuring and monitoring electrical conductivity in conductive fluids.

If used as conductivity limiter or continuous blowdown controller in steam boilers, the conductivity electrode LRG 16-9 can be used with the following equipment:

- Conductivity switch LRS 1-7
- Conductivity switch LRS 1-50
- Conductivity controller LRR 1-50
- Conductivity controller LRR 1-52

To guarantee a trouble-free operation observe the requirements made on water as specified in the pertinent TRD and EN regulations.

The equipment must only be used within the admissible pressure and temperature ratings.

Function

The conductivity electrode LRG 16-9 is used in combination with the following equipment as conductivity limiter and continuous blowdown controller in steam boilers:

**Conductivity switch LRS 1-7**
**Conductivity switch LRS 1-50**
**Conductivity controller LRR 1-50**
**Conductivity controller LRR 1-52**

In addition the equipment can measure conductivity in condensate and feedwater systems and in cooling and cleaning water.

The conductivity electrode LRG 16-9 in conjunction with conductivity switch LRS 1-7 is also approved for feedwater monitoring on board of seagoing vessels.

The conductivity electrode works in conjunction with conductivity switches or controllers and monitors the conductivity in conductive fluids.

To measure the fluid temperature a resistance thermometer Pt 100 is integrated in the electrode.

A short circuit or wire breakage in the conductivity electrode will trigger an error message in the conductivity switch or controller.
Important notes

Safety note

The equipment must only be installed, wired and commissioned by qualified and competent staff. Retrofitting and maintenance work must only be performed by qualified staff who - through adequate training - have achieved a recognised level of competence.

Danger

When loosening the conductivity electrode steam or hot water might escape! This presents the risk of severe scalding all over the body! It is therefore essential not to dismantle the electrode unless the boiler pressure is verified to be 0 bar.

The conductivity electrode becomes hot during operation. Risk of severe burns to hands and arms. Before carrying out installation and maintenance work make sure that the equipment is cold.

Attention

The name plate specifies the technical features of the equipment. Do not commission or operate any item of equipment that does not bear its specific name plate.
Directives and standards

Pressure Equipment Directive 2014/68/EU

The conductivity control and monitoring equipment LRG 1-.., LRS 1-.., LRR 1-5 meet the safety requirements of the Pressure Equipment Directive (PED). The conductivity control & monitoring equipment is EC type approved according to EN 12952/EN 12953. These Directives state, among other things, the requirements made on limiting systems and equipment for steam boiler plants and (pressurised) hot-water installations.

VdTÜV Bulletin "Water Monitoring 100"

The conductivity electrode LRG 16-9 in conjunction with the following conductivity switches and controllers is type approved according to VdTÜV Bulletin "Water Level 100": LRS 1-7, LRS 1-50, LRR 1-50 and LRR 1-52.

The VdTÜV Bulletin "Water Monitoring 100" states the requirements made on water monitoring equipment.

Approvals for Marine Applications

The conductivity electrode LRG 16-9 in conjunction with conductivity switch LRS 1-7 is approved for feedwater monitoring on seagoing vessels. See data sheet.

ATEX (Atmosphère Explosible)

The equipment is a simple item of electrical equipment according to DIN EN 50020 section 5.4. According to the European Directive 2014/34/EU the equipment must be equipped with approved Zener barriers if used in potentially explosive areas. Applicable in Ex zones 1, 2 (1999/92/EC). The equipment is not Ex marked.

UL/cUL (CSA) Approval

The equipment complies with the requirements of the following standards: UL 508 and CSA C22.2 No. 14-13, Standards for Industrial Control Equipment. File E243189.

Note on the Declaration of Conformity / Declaration by the Manufacturer Ĉ€

For details on the conformity of our equipment according to the European Directives see our Declaration of Conformity or our Declaration of Manufacturer.

The current Declaration of Conformity and Declaration of Manufacturer are available in the Internet under www.gestra.com ➔ documents or can be requested from us.
Technical data

**LRG 16-9**

**Service pressure**
PN 40, 32 bar at 238°C

**Mechanical connection**
Screwed G ½ A, ISO 228 (NPT also available)

**Materials**
Screw-in body: 1.4571, X6CrNiMoTi17-12-2
Measuring electrode: 1.4571, X6CrNiMoTi17-12-2
Electrode rod insulation: PEEK

**Cell constant**
0.5 cm⁻¹

**Electrical connection**
M 12 sensor connector, 5 poles, A coded

**Protection**
IP 65 to DIN EN 60529

**Ambient temperature**
Max. 70°C

**Weight**
Approx. 0.3 kg

**Approvals:**
- TÜV certificate: VdTÜV Bulletin "Wasserüberwachung 100" (= Water Monitoring 100): Requirements made on water monitoring equipment
- Type approval: TÜV · WÜL · XX-014, XX-017, XX-018 (see name plate)
- Marine applications: In accordance with Germanischer Lloyd Directive GL 60444-09 HH

Installation

- continued -

**Note**

- The conductivity electrode is designed for installation in pipes.
- The conductivity electrode is installed in a socket end, a measuring chamber or a mounting flange.
- When installing the conductivity electrode please consider a min. space of 50 mm required for servicing and removing the conductivity electrode.

**Attention**

- Install conductivity electrode horizontally or with a vertical inclination. The measuring surface must be permanently submerged.
- Make sure that the sealing surface of the screwed connection is accurately machined.
- Use only the supplied ring joint 21 x 26, form D, DIN 7603, made from 1.4301, bright annealed!
- Do not insulate electrode thread with hemp or PTFE tape!
- Do not apply conductive paste or grease to the electrode thread!
- Observe the specified tightening torque.
- Leave a space of **approx. 15 mm** between the lower end of the measuring tube and the wall of the pipe.
- Do not cut the measuring electrode and the measuring tube!

**Mounting conductivity electrode**

1. Check seating surfaces. **Fig. 3**
2. Place supplied joint ring 3 onto seating surface of the threaded standpipe or flange.
3. Apply a light smear of heat resistant silicone grease (e.g. WINIX® 2150) to the electrode thread 3.
4. Screw conductivity electrode into threaded standpipe and tighten with an open-end spanner A. F. 27 mm. The torque required for tightening **when cold is 110 Nm**.

**Important Notes**

- The conductivity electrode is mounted in a bypass below the main line. This arrangement prevents gas bubbles and flash steam from reaching the equipment. **Fig. 7**
- A throttling point, e.g. a non-return valve (GESTRA type RK 86) should be installed in the main line.
- To prevent air and dirt particles from getting into the bypass make sure that the bypass is below the main line.

**LRG 16-9**

Conductivity electrode LRG 16-9 with measuring chamber for installation in a bypass together with the measuring sensor ORG 12 / 22 of the oil & turbidity detector OR 52-5 / OR 52-6.

### Important Notes

- The conductivity electrode together with the measuring transducer ORGG 12 / 22 is mounted in a bypass below the main line. This arrangement prevents gas bubbles and flash steam from reaching the equipment. Please see also installation instructions for OR 52-5 / OR 52-6. **Fig. 8**
- A throttling point, e.g. a non-return valve (GESTRA type RK 86) should be installed in the main line.
- To prevent air and dirt particles from getting into the bypass make sure that the bypass is below the main line.

Electrical connection

Connecting the conductivity electrode

The conductivity electrode LRG 16-9 is equipped with a sensor plug-in connection type M 12, with 5 poles, A-coded, pin assignment see Fig. 9. For connecting the electrode preconfigured control cable assemblies (with male and female connectors) of various lengths are available as add-on equipment.

**Note that the recommended control cable is not UV resistant and, if installed outdoors, must be protected by a UV resistant plastic tube or cable duct.**

If you do not use the prefabricated control cable assembly, use screened five-core control cable, e. g. LiYCY 5 x 0.5 mm², for connecting the equipment. In addition, connect at the electrode end a screened female connector to the control cable.

**Max. cable length between conductivity electrode and switch or controller: 30 m, with conductivities from 1 to 10 μS/cm: max. 10 m.**

**Attention**

- If the above-mentioned control cable assembly is not used, the connecting line must be provided with a screened female connector according to the wiring diagram. **Fig. 7.** Observe the mounting instructions of the connector manufacturer.
- Make sure that connecting cables leading to the equipment are segregated and run separately from power cables.
- Connect screens according to the installation instructions for the conductivity switches/controllers LRS 1-7, LRS 1-50, LRR 1-50 and LRR 1-52.
# Troubleshooting

## Indication, diagnosis and remedy

### Attention

Before carrying out the fault diagnosis please check:

**Supply voltage:**
Is the conductivity switch / controller supplied with the mains voltage specified on the name plate?

**Wiring:**
Is the wiring in accordance with the wiring diagram?

### Indication of malfunctions

<table>

### Attention

- For commissioning and troubleshooting also observe the installation & operating manuals for LRS 1-7, LRS 1-50, LRR 1-50 and LRR 1-52.
Maintenance

Safety note

The equipment must only be installed, wired and commissioned by qualified and competent staff. Retrofitting and maintenance work must only be performed by qualified staff who – through adequate training - have achieved a recognised level of competence.

Danger

When loosening the conductivity electrode steam or hot water might escape! This presents the risk of severe scalding all over the body! It is therefore essential not to dismantle the conductivity electrode unless the boiler pressure is verified to be 0 bar.

The conductivity electrode becomes hot during operation.

Risk of severe burns to hands and arms.

Before carrying out installation and maintenance work make sure that the equipment is cold.

Cleaning measuring electrode

1. Detach sensor sleeve from the conductivity electrode.
2. Before removing the equipment make sure that is is neither hot nor under pressure.

Cleaning the measuring electrode (measuring surface):

- Wipe off non-adhesive deposits with a grease-free cloth.
- To remove adhesive deposits use emery cloth (medium grain).

Re-install the conductivity electrode. Observe the notes given in section "Installation" and "Electrical Connection".

Removing and disposing of the conductivity electrode

Remove and discard conductivity electrode LRG 16-9

1. Detach sensor sleeve from the conductivity electrode.
2. Before removing the equipment make sure that is is neither hot nor under pressure.

For the disposal of the equipment observe the pertinent legal regulations concerning waste disposal.

If faults occur that are not listed above or cannot be corrected, please contact our service centre or authorized agency in your country.
