Steam Traps

BK 37 / BK 37-ASME, PN 63/CL 400, DN 15, 20, 25

BK 28 / BK 28-ASME, PN 100/CL 600, DN 15, 20, 25

BK 29 / BK 29-ASME, PN 160/CL 900, DN 15, 20, 25

Description

Thermostatic/thermodynamic steam trap with corrosion resistant Thermovit® regulator (bimetallic plates) able to withstand waterhammer. With internal strainer and integral non-return valve action. Asbestos-free body gasket (graphite/CrNi). Installation in any position.

The default factory setting enables the steam trap to discharge condensate with virtually no banking-up.

Function

During start-up of the plant the steam trap is completely open. Cold condensate and air are discharged.

As the temperature rises, the bimetallic plates deflect, drawing the stage nozzle towards the closed position.

Just before the condensate reaches saturated steam temperature the orifice will be shut off tight. The thermodynamic effect of the stage nozzle chamber assists in the closing process.

The steam trap provides automatic air-venting at start-up and during operation of the plant. BK 37..., BK 28... and BK 29... can also be used for thermal air-venting.

Temperature/Pressure Ratings & End Connections

BK 37, Flanges PN 63 / 100 EN 1092-1

Steam traps

BK 37 / BK 37-ASME

BK 28 / BK 28-ASME

BK 29 / BK 29-ASME

Capacity Chart

The chart shows the capacities for hot and cold condensate.

Curve ①

This curve indicates the max. capacity of hot condensate that the steam trap BK 37 can discharge with virtually no banking up.

Curve ②

This curve indicates the max. capacity of hot condensate that the steam traps BK 28 and BK 29 can discharge with virtually no banking up.

Curve ③

This curve indicates the max. capacity of cold condensate (20 °C) that the steam traps BK 37, BK 28 and BK 29 can discharge.

Capacity Chart

When ordering please state:

Material, material of screws/bolts, steam pressure & temperature, back pressure, condensate flowrate, design, end connections, nominal size, details of application or type of steam consumer.

The following test certificates can be issued on request, at extra cost:

In accordance with EN 10204-2.2, 3.1 and 3.2.

All inspection requirements have to be stated with the enquiry/order. After supply of the equipment certification cannot be established. Charges and extent of the above mentioned certificates as well as the different tests confirmed therein are listed in our price list "Test and Inspection Charges for Standard Equipment". For other tests and inspections please consult us.

PED (Pressure Equipment Directive)

The equipment fulfils the requirements of the Pressure Equipment Directive PED 97/23/EC.

For use with fluids of group 2.

The equipment is excluded from the scope of the PED according to Article 3.3 and must not bear a CE marking.

ATEX (Atmosphère Explosible)

The equipment does not have its own potential source of ignition and is therefore not subject to the ATEX Directive 94/9/EC.

Applicable in Ex zones 0, 1, 2, 20, 21, 22 (1999/92/EC). The equipment does not bear an Ex marking.

Supply in accordance with our general terms of business.
